

“Il bello delle colonne Eos  
è che basta guardarle per capire  
di essere in un locale di qualità.”

*“What I simply like of the Eos towers  
is how they reflect the high quality of my pub.”*

*Martina Franco, Yerbabuena, Rimini*

Design, materials, finishes  
for a timeless Eos tower.

Thanks to their swift, lean, upward lines, the Eos beer towers are now the ultimate benchmark on the market. An elegant design goes hand in hand with unique technologies, like the ICETECH and its freezing effect system. Quality, research, and innovation from Celli.

**CELLI**<sup>®</sup>  
Italian design for better drinking

# CELLI

## story of success

Il Gruppo Celli è leader globale nel settore degli impianti e accessori per la spillatura di bevande. Oltre 45 anni di storia di successo per un'azienda simbolo di qualità Made in Italy, affidabilità, design e innovazione con soluzioni d'eccellenza, che assicurano a professionisti e consumatori del beverage, una drinking experience senza precedenti.

The Celli Group is a global leader in dispensing equipment systems and accessories. With over 45 years of experience to its name, the company is the true embodiment of Made-in-Italy quality, reliability, design and innovation thanks to its excellent solutions, which guarantee both beverage professionals and consumers an unmatched drinking experience.

## The Celli Group **A GLOBAL PLAYER**

Celli è stata protagonista di un'evoluzione che l'ha portata ad acquisire importanti aziende legate al mondo del dispensing equipment, diventando un Gruppo a vocazione internazionale, capace di esportare prodotti e servizi in più di 100 paesi nel mondo. L'approccio del Gruppo Celli è orientato alla massima qualità del prodotto e alla cura delle esigenze di ogni cliente. Che si parli di birra, soft drink o acqua, se dite "spillatura" dite "Celli Group".

In recent years, Celli has acquired a number of leading companies operating in the dispensing equipment sector. The companies have formed a Group with an international focus, capable of exporting products and services to more than 100 countries worldwide. The Group's approach is focused on maintaining maximum product quality while remaining attentive to individual customer needs. Whether you're into beer, soft drinks or water, if you say, "draught" we say "Celli."

# VISION

## il valore assoluto della spillatura the value of draught beer

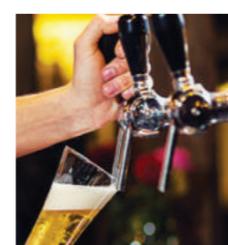

Avere una visione significa essere capaci di guardare avanti, di immaginare il domani senza lasciarsi sopraffare dalle certezze acquisite. Dall'esperienza e dall'innovazione di Celli nasce una vision basata sul valore della spillatura, dove progressivamente le bevande imbottigliate spariscano da bar e locali. Da anni **Celli opera per costruire un futuro dove la spina diventi il modo più diffuso per gustare una birra. La qualità delle bevande erogate, per genuinità e freschezza, è infatti nettamente superiore.** Le proprietà organolettiche delle bevande rimangono inalterate, e l'impatto ambientale è drasticamente ridotto, così come il consumo energetico. La gestione dei rifiuti e degli spazi interni del locale, diventano più sostenibili e il mestiere del barista è più valorizzato e coinvolgente.

Having a vision means being able to look to the future and to imagine a tomorrow without being overwhelmed by supposed 'certainties.' Thanks to Celli's experience and innovative focus, the Group has built a vision based on the value of draught beer, which sees bottled drinks progressively disappearing from bars and clubs. For years, **Celli has been working on a future where taps are the most popular way to enjoy beer. Draught beer is often far superior thanks to its pure, fresh flavour,** and while its taste essentially remains unchanged, environmental impact and energy consumption are drastically reduced. Waste management also becomes more sustainable and the bartender's job more valued and engaging.

BRANDING

SUSTAINABILITY

Celli è da sempre impegnata nella promozione della migliore drinking experience per il consumatore e nella valorizzazione del brand delle aziende del settore beverage, attraverso la personalizzazione delle colonne dal grande impatto visivo. **E da oggi, Celli introduce "IntelliDraught, una tecnologia che cambia profondamente il mondo del beverage.** Infatti, grazie a prodotti smart e connessi, in grado di comunicare a un sistema di gestione dati unitario, è possibile raccogliere in qualsiasi momento preziosissime informazioni sullo stato dell'impianto, sulla qualità della bevanda erogata e sulle abitudini di consumo. Una rivoluzione che offre innumerevoli benefici alle aziende del beverage, ai loro clienti e al fornitore di impianti e servizi per la spillatura, questo con un fortissimo impatto sull'ambiente, sui consumatori e sull'arte della spillatura in generale.

Celli has always been committed to promoting the very best consumer drinking experience while enhancing brand visibility for companies in the beverage sector, which it achieves by producing towers with a striking, custom design. **Celli is currently developing a new product called IntelliDraught, which is equipped with technology that's destined to change the beverage world forever.** In fact, with the help of smart, connected products, this new technology can communicate with a single data management system, providing precious information on the tap itself, beverage quality and consumption habits whenever needed. A revolution that promises to offer countless benefits to beverage companies, their customers and to suppliers of dispensing equipment systems and services. And all of this is achievable while drastically changing the environmental, consumer and draught beer landscapes for good.

# PRODUCT

efficienza e bellezza senza tempo  
timeless beauty and efficiency

Tecnologia e design sono due fattori indissolubili nella realizzazione delle colonne Celli. Continua ricerca e sviluppo, danno vita a prodotti affidabili, tecnologicamente all'avanguardia e icone di stile, originali e ricercate. La qualità certificata dei prodotti e dei servizi Celli è frutto di una filosofia orientata ai clienti e al consumatore finale, al valore attribuito alla qualità stessa; un metodo che si applica all'intero processo produttivo, dallo sviluppo all'installazione, fino ai servizi post vendita.

Technology and design are two key factors when it comes to creating Celli towers. The company's commitment to continuous research and development has given life to reliable, technologically advanced products that are unique, elegant icons of style. Celli guarantees quality products and services thanks to the importance it places on its customers, consumers and the value of quality itself. And the Group applies this philosophy to its entire production chain, from development to installation, through to post-sales services.

# COLONNE TOWERS

Se non specificato, la fornitura delle colonne non comprende accessori quali: rubinetti, placche, medaglioni, distanziali, kit ricircoli, trasformatori, ecc. Tali accessori vanno sempre richiesti separatamente.

I prodotti qui presentati possono essere coperti da brevetto, marchio registrato, diritti d'autore, o altri diritti di proprietà industriale.

La Celli S.p.A. è titolare del diritto d'autore relativo al presente catalistino: è quindi vietata la riproduzione parziale e/o integrale. I dati, le misure, gli articoli, le caratteristiche e comunque tutti gli altri dati riportati potranno essere modificati senza preavviso nell'ottica di un continuo miglioramento che fa parte della Celli S.p.A., una azienda leader del settore.

#### Colonne in metallo

Dove specificato, le colonne in ottone Celli S.p.A. sono già dotate di un tubo prodotto con delle caratteristiche particolari: il materiale impiegato è in acciaio inox Aisi 301/316 come anche la boccola all'uscita, là dove va a contatto col rubinetto. L'applicazione di questa boccola avviene tramite mandrinatura, e non per saldatura; con questo procedimento la bevanda entra in contatto esclusivamente con acciaio inox Aisi 301/316, specifico per l'uso con prodotti alimentari, evitando cessioni di saperi e ossidazioni dovute alla saldatura.

**Pulizia:** la superficie in ottone va pulita con un panno morbido e un prodotto specifico come ad esempio Sidol, distribuendo la pasta sulla superficie e strofinando energicamente per ottenere la lucentezza, e rimuovendola poi con un panno pulito e asciutto. Se la superficie è trattata galvanicamente, la pulizia va fatta con un panno morbido imbevuto di acqua tiepida, eventualmente con aggiunta di detergente neutro (non chimici o abrasivi) e asciugandola con un panno asciutto.

#### Imballaggi ecologici su colonne eos - valy - azur

La Celli si impegna costantemente per il rispetto dell'ambiente. Cosciente dell'importanza degli imballaggi in termini di impatto ambientale, ha iniziato a sostituire quelli esistenti con altri più performanti sia dal punto di vista qualitativo che dal punto di vista ambientale.

È stato infatti sostituito il polistirolo, dannosissimo per l'ambiente, con un nuovo materiale.

Il nuovo packaging è:

- RICICLABLE AL 100% E PROVENIENTE DA MATERIALE RICICLATO ALL'80%
- PIÙ AFFIDABILE GRAZIE ALLA PARTICOLARE DENSITÀ ED ALLA FORMA INNOVATIVA E FLESSIBILE
- PIÙ LEGGERO DI CIRCA IL 30% RISPETTO AL PRECEDENTE
- CONTRIBUISCE ALLA RIDUZIONE DI EMISSIONI DI CO<sub>2</sub> DURANTE IL TRASPORTO
- IL CARTONE ESTERNO È REALIZZATO CON CELLULOSA PROVENIENTE DA FORESTE GESTITE RESPONSABILMENTE

Celli sta lavorando per fornire questo imballo su tutta la gamma.

The towers are not supplied with accessories, such as taps, badges, badgeholders, distancepieces, recirculation kits, transformer, a.s.o. These accessories have to be ordered always separately. Products shown in Celli catalogues may be protected by patents, trademarks, copyright or other proprietary industrial right. Celli S.p.A. is the owner of the copyright for this catalogue. It may not be reproduced either partially or entirely. Data, dimensions, articles, features and performances and all other performances indicated in this catalogue, may vary without prior notice as result of our policy of constant improvement making Celli one among the world wide leaders of dispensing equipment.

#### Metal towers

Where specified, towers by Celli S.p.A. are already fitted with a special pipe for the drink to be dispensed. This tube is made in AISI 304/316 stainless steel, as is the bush at the end of the pipe, where it joins the tap. The bush is shrink-fitted onto the pipe, without welding, so that the drink comes into contact only with AISI 304/316 stainless steel, specifically produced for use with foodstuffs, thereby avoiding the tainting of drinks and corrosion.

#### Cleaning instructions for galvanized brass

Surfaces in gilt, chromed and nickelated brass must be cleaned with a soft cloth moistened in warm water and if necessary a neutral detergent. DO NOT use chemical or abrasive detergents or rough cloths that could scratch the surface. Dry the surface with a clean, dry cloth.

#### Eco-friendly packaging for EOS – VALY – AZUR towers

Celli is continuously engaged in respecting the environment. Celli knows that packaging has an important role too in the environmental impact, and therefore has begun to replace the existing packaging with better ones in terms of quality and environmental sustainability. Polystyrene, a component with a negative impact on the environment, has been replaced by a new material.

The new packaging is:

- 100% RECYCLABLE AND MADE FOR THE 80% OF RECYCLED MATERIAL
- RELIABLE THANKS TO ITS PARTICULAR DENSITY AND ITS INNOVATIVE AND FLEXIBLE SHAPE
- 30% LIGHTER COMPARED TO THE FORMER PACKAGING
- CONTRIBUTING TO REDUCE CO<sub>2</sub> EMISSIONS DURING TRANSPORT
- THE EXTERNAL BOX IS MADE OF PAPER COMING FROM RESPONSIBLE SOURCES

Celli is working to provide this new packaging soon for the whole range of products.

# Colonne Cobra® Cobra® towers

## Cobra®, la grande bellezza

Non c'è storia senza una protagonista, e la protagonista della storia di Celli è la Colonna Cobra®.  
Nata come colonna in ottone in 1 e 2 vie da una grande intuizione di Goffredo Celli, si è affermata nei primi anni 80 come icona dello stile Made in Italy nel settore della spillatura.  
Sulla scia di questa popolarità verso la fine degli anni 80 nascono le sorelle Plus Large, Plus 2, Medium e Small per moltiplicarsi poi negli anni successivi nei modelli PLUS 3 e PLUS 4.  
Nel nuovo millennio il trend di illuminare il marchio del prodotto da erogare impreziosisce tutta la gamma delle Cobra®.  
Quando nel 2005 parte dall'Australia l'attrattiva delle colonne ICE, le Cobra® Plus 3 e Plus 4 si evolvono in B3 e B4 presentandosi in una unica fusione. Diventano così idonee come le sorelle a 1 e 2 vie per essere inondate e ottenere l'effetto ghiaccio o condensato.  
Cobra® è un marchio registrato dalla Celli S.p.A. e la colonna Cobra® Plus è un modello depositato.

La COBRA® LUXURY che fa parte della gamma GLAMFONTS, è una colonna effetto pelle di serpente che è diventata l'icona del trend lussuoso presente in molti locali: sontuosa ricchezza, atmosfere di classe, i fasti di uno stile che si esprime nei materiali splendidi e pregiati.  
E proprio come nel film di Sorrentino, imitazioni degradanti e falsi storpianti appaiono e scompaiono all'orizzonte così da ottenere come unico effetto quello di valorizzare la bellezza della Cobra® Celli rendendola ancora più grande e inimitabile.

COLONNE IN OTTONE  
BRASS TOWERS

## Cobra®, the great beauty

There is no story without a main player, and the main player in the story of Celli is the Cobra® beer tower.  
First created as a one and two-way brass tower from a great intuition of Goffredo Celli, it became a made-in-Italy style icon in the beer dispensing sector in the early 1980s.  
On the wake of this popularity, the late 1980s saw the birth of the sister products Plus Large, Plus 2, Medium, and Small, which were later developed into the models PLUS 3 and PLUS 4.  
In the new millennium the backlit badge became a precious trendy feature of the whole Cobra® range.  
In 2005, when the attractive ICE towers arrived from Australia, Cobra® Plus 3 and Plus 4 were developed into B3 and B4, obtained from a single mould.  
Like their one and two-way versions, they could thus be cooled to obtain a frozen or condensed effect.  
Cobra® is a registered trademark of Celli S.p.A. and the Cobra® Plus tower is a registered design.

The COBRA® LUXURY, part of the GLAMFONTS range, it is a tower with a snake-skin effect representing the icon of the luxury trend in place in lots of pubs: exquisite make, classy atmospheres, the luxury of a style exuding from beautiful and precious materials.  
Like in Sorrentino's movie, humiliating imitations and mangling fakes appear and disappear on the horizon, with the sole result of enhancing the beauty of Celli Cobra®, making it even greater and more inimitable.

ZENITH

## Sistema Cold kit Cold kit system

Celli ha sviluppato un sistema per mantenere le linee birra refrigerate fino al rubinetto. Si tratta di tecnologia importantissima per chi è attento alla qualità del prodotto che offre ai propri clienti.

I vantaggi dei rubinetti refrigerati sono numerosi:

- Riduce il quantitativo di schiuma durante la prima erogazione
- La temperatura della birra è sempre ottimale
- Si rallenta la proliferazione batterica

Come è possibile vedere nell'esplosivo, si tratta di uno scambiatore termico in ottone che essendo saldato con il tubo di ricircolo (acqua o glicole) permette il trasferimento di freddo fino al rubinetto. La grande novità è che questo sistema consente la refrigerazione del rubinetto evitando la condensazione del corpo della colonna. Come si può osservare nella foto sotto, infatti, la boccola, fissata al corpo della colonna tramite due viti frontal, è isolata con taglio termico.

Per questa soluzione è stata depositata una domanda di brevetto. Il Cold Kit è disponibile su richiesta (quantità minima ordine: 30 pezzi) su tutte le colonne BRAHAUS, HAVANA, TUBE, AZUR, WAVE, ZENIT, MOON, ROMANTIC e anche per le recenti versioni EOS a T.

Celli has developed a new system in order to keep the beer lines cold right up to the tap. Celli believe this technology is extremely important for those who want to provide their customers with a quality product.

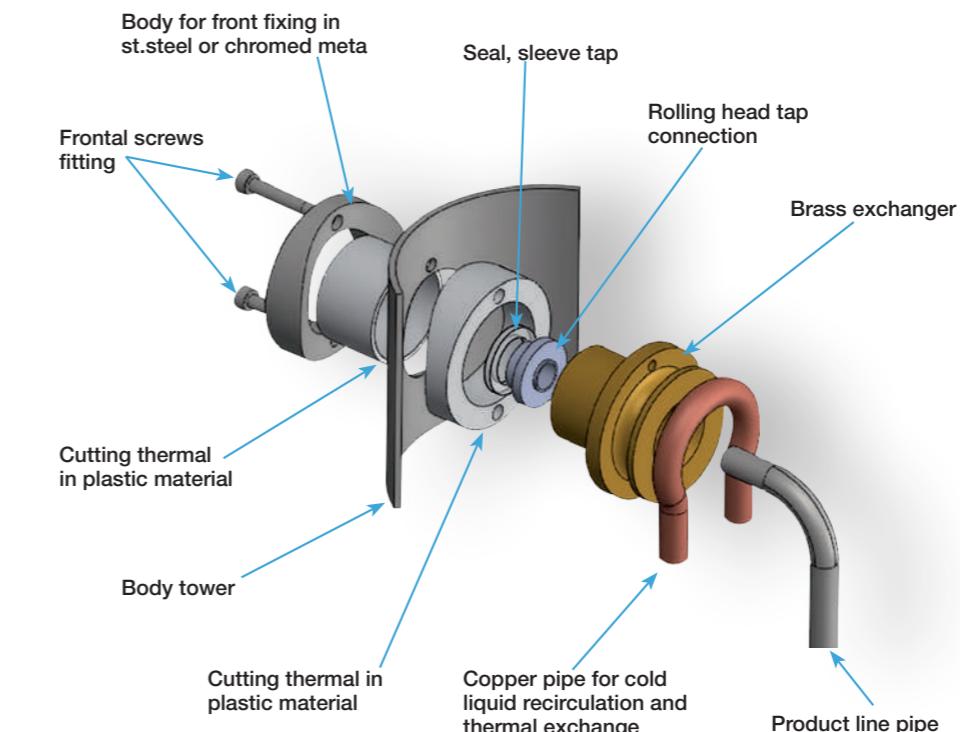

The benefits of the refrigerated taps are numerous:

- It reduces the amount of head during first dispensing
- The temperature of the beer is always optimal
- The proliferation of bacteria slows down

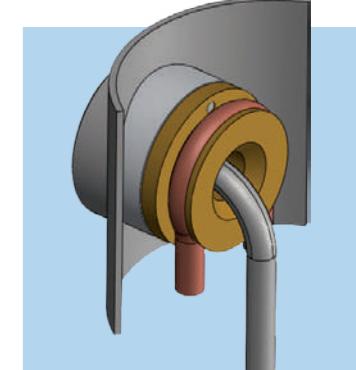

As we can see in the exploded drawing, it has to do with a brass heat exchanger that because it is welded to the recirculation pipe (water or glycol) it allows the cold to be transferred right up to the tap. The big news is that this system allows you to cool the tap without having any condensation on the body of the tower. As we can see in the photo below, the bushing fixed to the body of the tower by means of two front screws is isolated with a thermal cut.

A patent application has been filed for this solution.

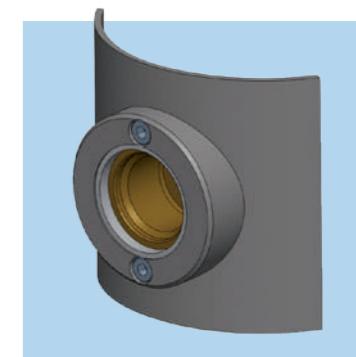

The Cold Kit is available upon request (minimum order quantity 30 pcs.) on all the BRAHAUS, HAVANA, TUBE, AZUR, WAVE, ZENIT, MOON, ROMANTIC towers and also for the recent EOS T versions.

# Colonne Brauhaus Brauhaus towers

Installazioni per la spillatura,  
originali e d'impatto.

Da anni Celli porta nei migliori locali di tutto il mondo la qualità e la bellezza di installazioni che garantiscono la miglior drinking e branding experience, grazie ad impianti di spillatura inconfondibili, capaci di coniugare un forte impatto visivo con tecnologie sempre all'avanguardia.

Le colonne Brauhaus Celli, rendono possibili installazioni non solo qualitativamente all'avanguardia e affidabili, ma anche spettacolari ed innovative, permettendo ai brand di birra di comunicare il proprio marchio in tutta la sua potenza, ai baristi di far emergere con soddisfazione la loro professionalità e ai consumatori di essere al centro della più coinvolgente esperienza di consumo.

## Original and impactful dispensing equipment

For years now, Celli has been bringing to the best establishments in the whole world the quality and beauty of its installations, ensuring the best drinking and branding experience. This is thanks to its unmistakable draught systems, able to combine a strong visual impact with the most advanced technologies.

Brauhaus towers by Celli provide installations that are not only advanced in terms of quality and reliable, but also spectacular and innovative, so that beer brands can convey their brand in all its power, bar tenders can uncover their professionalism with satisfaction, and consumers can be at the centre of the most engaging consumption experience.

Brauhaus è disponibile:

- in acciaio lucido e ramato satinato
- attacco rubinetto 5/8"
- kit illuminazione medaglione bifacciale
- kit tubi di alimentazione e ricircolo 7x8mm, 6x7mm e 5x6mm (USA standard)

Brauhaus is available:

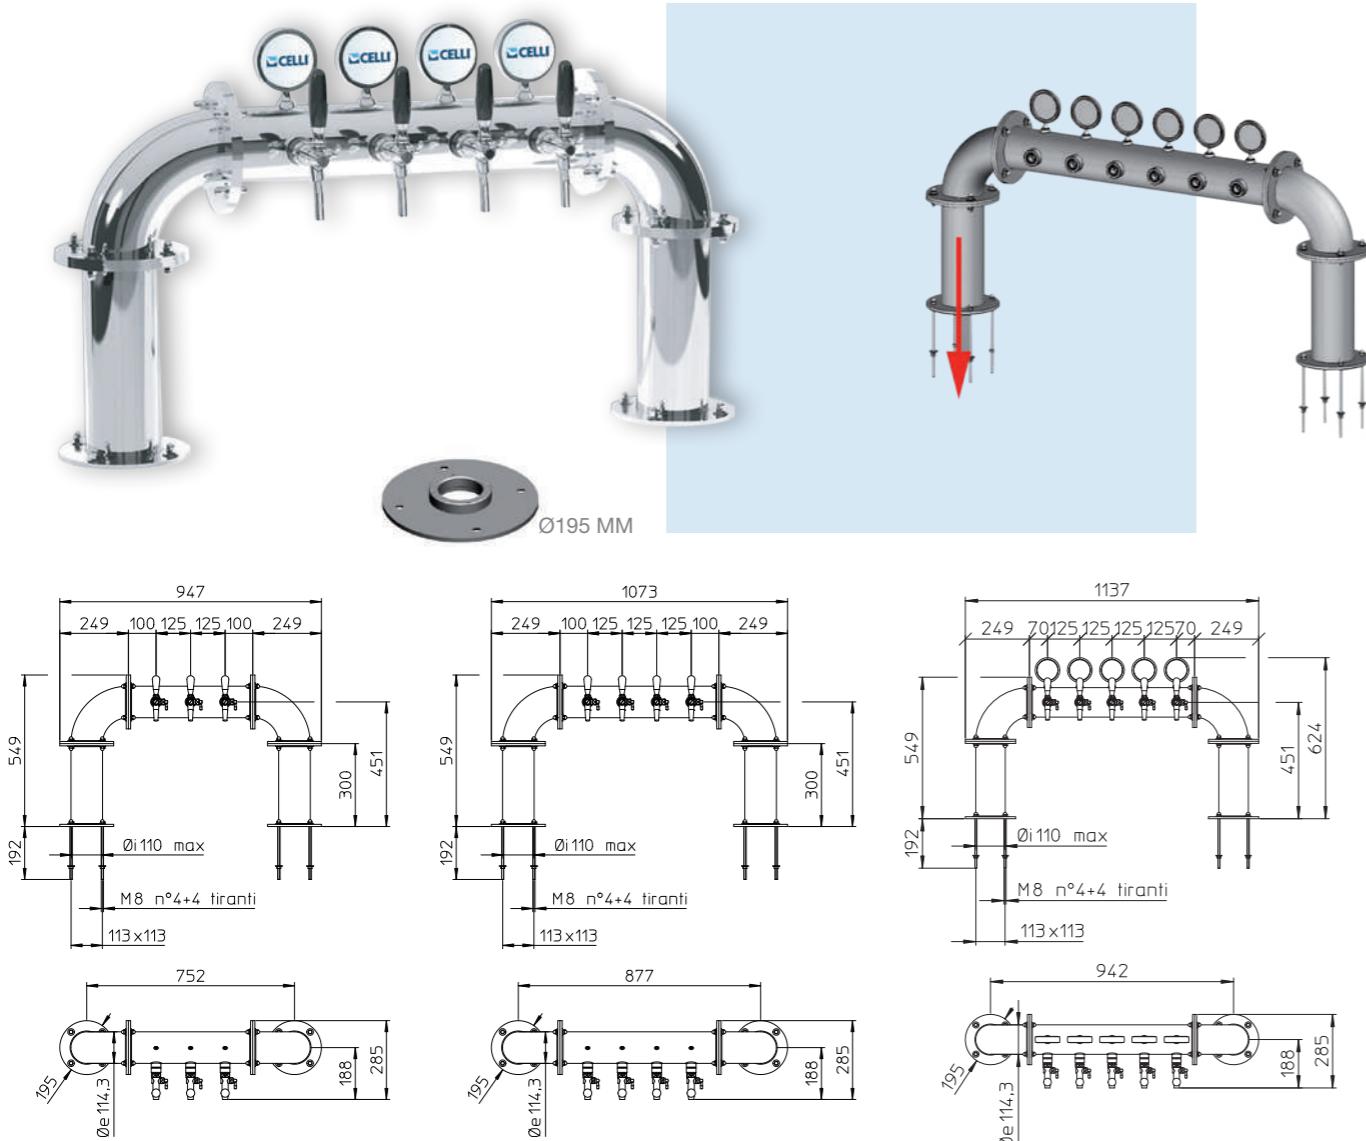

- in polished stainless steel and matt copper plated st.steel
- 5/8" tap connection
- lighting kit bifacial badges holders
- with product and recirculation tubing kit 7x8mm, 6x7mm and 5x6mm (USA standard)

## La colonna che cambia abito

Il design delle colonne nasce dal monitoraggio continuo del mercato globale. Sempre più spesso i birrifici acquisiscono nuovi brand, ampliano il portfolio di prodotti, aumentano le promozioni temporanee sui marchi, anche associate ad eventi musicali o sportivi.

Da questo nasce l'esigenza di colonne in cui il logo possa essere facilmente sostituito sul posto, senza richiedere la presenza di un tecnico. La lente di Lumina, interamente illuminata e personalizzata, si sfila e può essere sostituita velocemente con facilità sul bancone con un'altra lente, proprio come avviene con la cover di un cellulare.

Libertà di adattarsi al cambiamento in maniera veloce ed economica

**The freedom to adapt to change quickly and cost effectively**

SOTTILE • MODERNA  
ELEGANTE • SEMPLICE

THIN • MODERN  
SLEEK • SIMPLE

## The quick-changing font

At Celli, font design is inspired by on-going monitoring of the global market. More and more breweries grow through acquisitions and portfolio expansions, while increasing temporary brand promotions and tie-ups with music or sport events.

Hence the need for fonts that can be easily rebranded on site, with no need for a technician to attend the venue. The font lens of Lumina, illuminated throughout and customized, can be quickly and easily replaced with another one directly at the bar, as easily as a mobile phone cover.

- Capacità di emergere dalla folla

- 100% light - 100% branding
- Lumina can be easily rebranded
- On-trade brand-appropriate design
- The ability to stand out from the crowd

## Design e tecnologia

Il tratto che contraddistingue gli oggetti firmati Pininfarina si riconosce chiaramente in questa colonna, dal design leggero e originale. La colonna è caratterizzata da una forma armonica che si sviluppa verso l'alto con dinamismo e che racconta, attraverso l'evoluzione delle superfici, il passaggio dallo stato solido a quello liquido ripercorrendo così il processo di creazione della birra. La scelta dei materiali ne esalta l'aspetto tecnologico: il corpo è costituito da due gusci in alluminio cromato o ad effetto satinato.

## Drink Experience

L'asimmetria della struttura è stata concepita per permettere la vista del flusso di birra mentre riempie il bicchiere. Una drinking experience che inizia quindi già a livello visivo nel momento stesso della spillatura, come a far pregustare e assaporare con gli occhi il prodotto prima ancora che arrivi al palato.

## Branding

Il frontale della colonna è interamente dedicato al marchio. Inoltre la possibilità di scegliere la colorazione dei due gusci permette di personalizzare completamente "Fiamma" con i colori del brand, rendendola un importante elemento di comunicazione.

## Design & technology

The typical traits of Pininfarina objects are clearly recognizable in the airy and unusual design of this tower. The harmonious shape develops dynamically upwards and illustrates the change from the solid to the liquid state and, thus, the beer brewing process.

The selected materials enhance its technological character: the body is made up of two chromed aluminium or glazed shells.

## Drink Experience

The asymmetrical frame was designed to allow seeing the beer flow while filling the glass. Thus the drinking experience starts visually upon draft dispensing, almost to allow product appreciation even before it reaches the mouth.

## Branding

The front of the tower is completely covered by the logo. Moreover, the opportunity to choose the colours for both shells allows to customize "Fiamma" with the brand's colours, thus turning it into an effective communication tool.

Cinque stili diversi,  
in linea con i trend  
internazionali.

Da 40 anni Celli arreda i locali di tutto il mondo con le sue colonne, il cuore di bar, pub, club e ristoranti. Da questa grande esperienza è nata Glamfonts: una collezione originale e innovativa di cinque rivestimenti per colonne in sintonia con le tendenze più attuali dell'interior design.

I rivestimenti Luxury, Contemporary, Minimal, Hi-Tech e Wood sono pensati per dare ancora più personalità alle colonne. In più, con Glamfonts ognuno può scegliere uno stile che si integra alla perfezione con concept e codici estetici del locale.

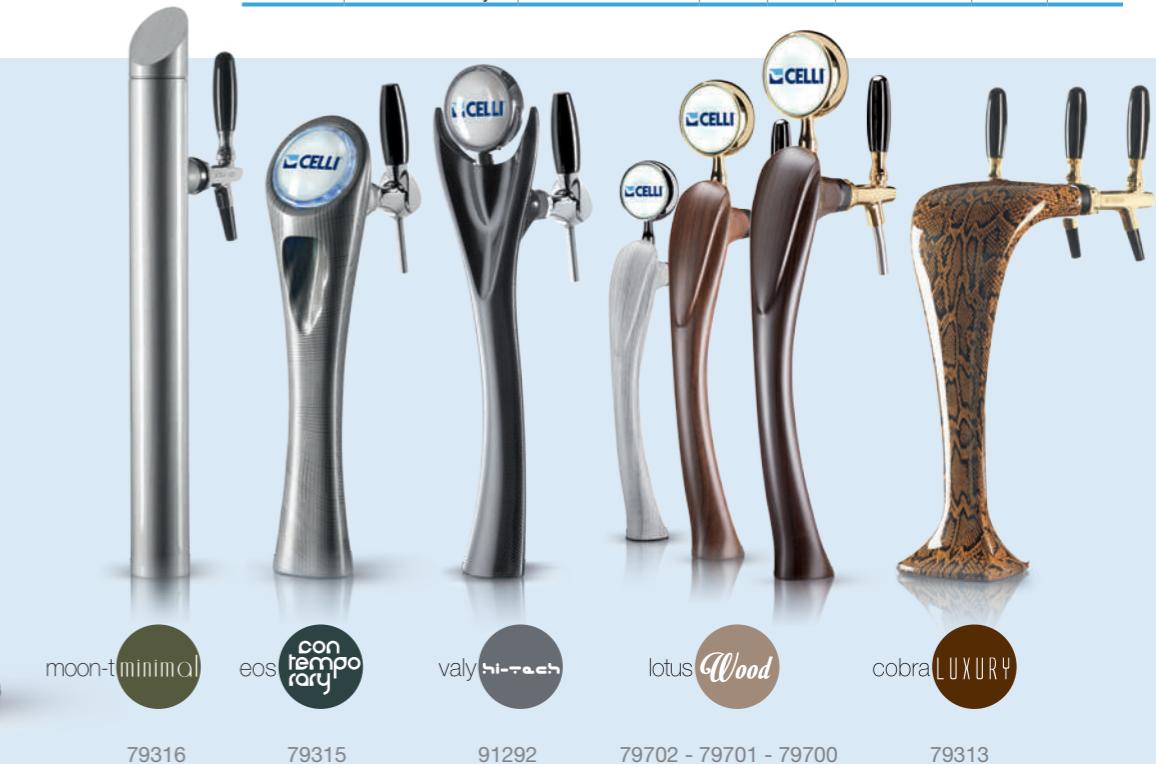

## Five different styles, reflecting international trends.

For 40 years, Celli towers have been at the heart of bars, pubs, clubs and restaurants worldwide. This special heritage has given birth to Glamfonts: a creative and innovative collection of five dressings for your towers, in sync with what's very trendy in interior design.

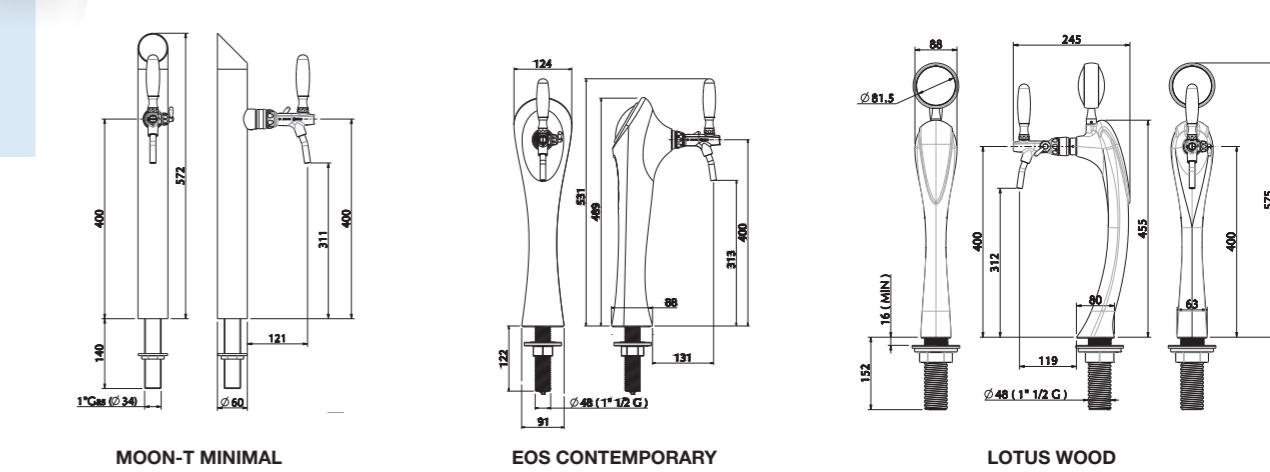

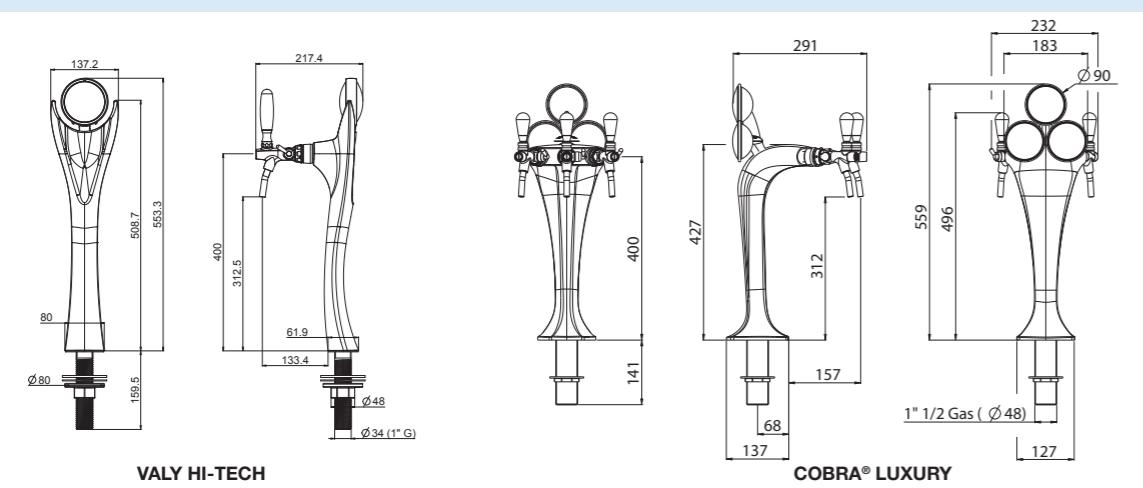

The Luxury, Contemporary, Minimal, Hi-Tech and Wood dressings have been designed to enrich the towers with even greater personality. In addition, Glamfonts allows you to choose your favourite style to perfectly match the concept and esthetic traits of your bar and restaurant.

L'extra cold non è  
mai stato così cool

Zero Tech è il sistema rivoluzionario di Celli per ghiacciare le colonne senza il bisogno di un impianto secondario. Zero Tech non richiede un impianto dedicato alla formazione del ghiaccio sulla colonna. Zero Tech consente una incredibile precisione e definizione nella ghiaccatura lungo le linee della colonna.

vedi da pagina 68 le colonne della linea Zero Tech

## Extra cold has never been so cool

Zero Tech is Celli's revolutionary system to freeze the towers with no need of a secondary cooler. Zero Tech does not require a dedicated cooler for forming the ice on the tower. Zero Tech allows an incredible precision and definition of the ice forming along the tower lines.

**see from page 68 for Zero Tech line towers**

COLONNE EFFETTO CONDENSA E ICE  
TOWERS ICE & CONDENSATION EFFECT

65

## Colonne effetto Ice

### CONDIZIONI AMBIENTALI OTTIMALI

Temperatura ambiente inferiore a 25°C umidità relativa superiore al 35%.

### MASSA DELLA COLONNINA

Maggiori sono le dimensioni della colonnina, maggiori dovranno essere la potenza refrigerante e la portata della pompa di ricircolo del glicole.

### INSTALLAZIONE DELLA COLONNINA

Evitare l'esposizione della colonnina a correnti d'aria, a luce diretta di faretti o ad altre fonti di calore. Isolare bene il collegamento al pitone per evitare formazione di condensa. Prevedere una base per la raccolta della condensa e dell'acqua al momento dello scongelamento.

### PITONE DI RICIRCOLO DEL GLICOLO

Con isolamento di spessore minimo 19mm e più corto possibile.

### POMPA DI RICIRCOLO

Deve avere portata e prevalenza adeguate alle condizioni di installazione (alte portate in caso di masse, temperature ambiente e lunghezza pitone elevate).

### TIPO DI GLICOLE E DILUZIONE

L'utilizzo di fluidi troppo viscosi riduce la portata della pompa di ricircolo e quindi la qualità del raffreddamento della colonnina. Il punto di congelamento del glicole non deve essere inferiore a -25/-30°C.

LOTUS ICE

## Tower Ice effect

### OPTIMAL AMBIENT CONDITIONS

Ambient temperature lower than 25°C - humidity higher than 35%.

### TOWER MASS

Greater tower dimensions need higher power of cooler and flow rate of recirculation pump of the glycol.

### TOWER INSTALLATION

Avoid exposition of the tower to blast, direct spot light and other heat sources. Make sure the connection to the Python is well insulated in order to avoid the formation of condensate. Provide a basis for condensate and water collection at the time of defrosting.

### PYTHON FOR GLYCOL RECIRCULATION

With a minimum insulation of 19mm and as shortest as possible.

### RECIRCULATION PUMP

It must have flow rate and lift cap acity appropriate to installation conditions (high flow rates in case of high masses, ambient temperatures and python length).

### GLYCOL TYPOLOGY AND DILUTION

Usage of too much viscous fluids reduces flow rate of recirculation pump and consequently cooling quality of the tower. The freezing temperature of the glycol has not to be lower than -25/-30°C. It is suggested the usage of fluids supplied by Celli S.p.A. selected for this kind of application (odorless and atoxic type).

### THERMOSTAT SETTING

-5°C setting is normally sufficient to obtain ICE effect with medium dimension towers in ideal installation conditions.

COBRA® ICE

MAYA ICE

Riccomanda l'utilizzo dei fluidi forniti dalla Celli S.p.A. selezionati per questo tipo di applicazione (tipo atossico e inodore).

### TARATURA DEL THERMOSTATO

Normalmente la taratura a -5°C è sufficiente per ottenere l'effetto ICE con colonnine di medie dimensioni nelle condizioni ideali di installazione.

### POTENZA DELL'IMPIANTO REFRIGERANTE

Deve essere adeguata al carico termico (massa della colonnina, temperatura ambiente, lunghezza del pitone).

### PERICOLO DI CONGELAMENTO DELLA BIRRA

La temperatura di congelamento della birra dipende dal contenuto alcolico della stessa. Per un suo calcolo approssimato si può utilizzare la seguente formula:

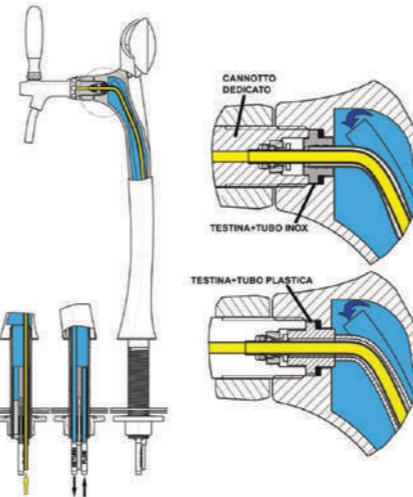

$$\text{Punto di congelamento (°C) della birra} = (-0,42 \times A) + 0,2$$

Dove A è la % di contenuto di alcool.

Una birra con contenuto di alcool del 5% congelerà quindi intorno ai -2°C. Occorre tenere presente che se nella vasca della macchina refrigerante il glicole è a -4/-5°C, esso circolerà all'interno della colonnina intorno ai -2/-3°C (dispersione nel pitone e nella colonnina). Una birra con contenuto alcolico del 5% nel tubo a diretto contatto con il glicole potrebbe congelare se la temperatura del glicole fosse inferiore a -2/-3°C. Nei casi in cui, per ottenere l'effetto ICE, fosse necessario scendere con la temperatura del glicole nella macchina sotto i -4/-5 °C (ad esempio temperatura ambiente elevata), si raccomanda di utilizzare colonnine con sistema tubo in tubo o a doppia camera M30.

## Sistema tubo nel tubo e a doppia camera (M 30)

Per evitare il congelamento della birra, della soluzione detergente impiegata per la pulizia delle linee o dell'acqua di risciacquo, è stato messo a punto uno speciale sistema che consiste in due tubi uno dentro l'altro. In quello più interno scorre la birra, quello più esterno funge da protezione creando una camera d'aria tra i due tubi che impedisce il congelamento della birra nel tubo interno anche quando il glicole si trova a -5°C. Sono disponibili due tipologie di questa tecnologia che si distinguono per il diametro dei tubi e per il sistema di tenuta nella zona del rubinetto. Il sistema denominato M30 "doppia camera" (disponibile su alcuni modelli di colonne) presenta un tubo esterno di diametro tale da consentire l'inserimento di un tubo birra di plastica con diametro esterno fino a 11mm. In questo caso si possono utilizzare rubinetti standard. Il sistema "tubo in tubo" alternativo all'M30 può essere utilizzato in qualsiasi colonna ICE e consente l'utilizzo di un tubo birra di plastica di diametro esterno massimo di 8mm. In questo caso il rubinetto deve essere provvisto di cartuccia John-Guest per il collegamento al tubo birra.

## Tube in tube system and double chamber (M30)

In order to prevent not only beer but also detergent used to clean the ways and rinse water, from freezing in the presence of glycol, Celli has studied a special system which consists in 2 tubes one inside the other. Beer flows in the inner tube, while the external one protects the beer line creating a special "air chamber" between the tubes which avoids the freezing of the beer even when glycol is at -5°C.

There are 2 tube in tube system typologies, which depend on the diameter of the tubes used and tap connection.

The system called M30 double chamber is available only on some tower models. It is characterized by an external tube with a larger diameter which is suitable to put inside a beer plastic line tube up to 11mm o.d. In this case it is possible to use standard taps. The alternative Tube in Tube system, which can be used on all ICE tower models, is characterized by a thinner external tube which is suitable to put inside a beer plastic line tube up to 8mm o.d. In this case the tap must be provided of JG cartridge.

## Cannotti fissaggio colonne - ice system®

Questo cannotto prevede un sistema brevettato che consente l'inondazione della colonna per ottenere l'effetto ICE. Sono disponibili 3 diametri diversi per soddisfare le varie esigenze del mercato: 1", 1,5" e 2". Il cannotto è ottenuto per stampaggio a iniezione di un materiale plastico resistente alle normali condizioni di utilizzo. L'utilizzo della plastica riduce il trasferimento di calore e quindi la formazione di condensa rispetto ai cannotti di metallo.

La filettatura del cannotto di plastica lo rende compatibile con tutte le colonnine Celli. Sono disponibili kit di conversione che permettono al cliente di trasformare alcune colonnine non ICE nella versione ICE.

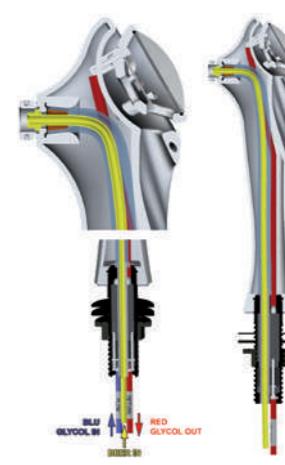

## Plastic shafts for ice towers - ice system®

This patented shaft system enables the tower to be flooded so as to obtain ICE effect. Three types of shaft diameter are available in order to satisfy all the different market needs: 1", 1,5" and 2 inches.

The shaft is injection moulded from a special material to guarantee a resistant anchorage. The use of plastic reduces heat transfer and therefore creates less condensation than a classic metal shaft.

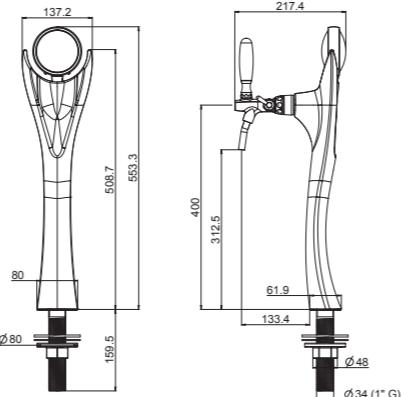

The plastic shaft thread complies with all Celli towers. Conversion kits are available in order to convert a standard tower to an ICE version one.

# Colonne Angram a Pompa e Sightglass

## Angram Beer Engines and Sightglass

### Il futuro della spillatura tradizionale

Angram è sinonimo di "beer engine", ossia del più tradizionale fra i sistemi di spillatura della birra.

L'azienda progetta e produce impianti di spillatura per la birra della migliore qualità, oltre a colonne, pomelli e molto altro per aiutare i marchi di birra e sidro a presentarsi al meglio, funzionare al meglio e distinguersi dalla massa - e tutto questo sul punto vendita, dove conta di più.

Angram è internazionalmente nota per la produzione delle pompe per la spillatura delle birre Ale con il tradizionale sistema "cask".

Un metodo di spillatura che è al centro di quel movimento di riscoperta dei prodotti tradizionali e delle birre artigianali diffuso in tutto il mondo.

### The future of traditional dispensing

Angram is renowned for its "beer engine", that is to say the most traditional among beer draught systems.

This company designs and manufactures draught equipment for the best quality beer, besides towers, knobs and much more to help beer and cider brands present themselves in the best way, work better and stand out from the crowd – and all this in the establishment, where it is most important.

Angram is also renowned in the world for the production of Ale draught pumps with the traditional "cask" system. This draught method plays an important part in the worldwide movement for the rediscovering of traditional products and craft beers.

**ANGRAM BEER ENGINE**

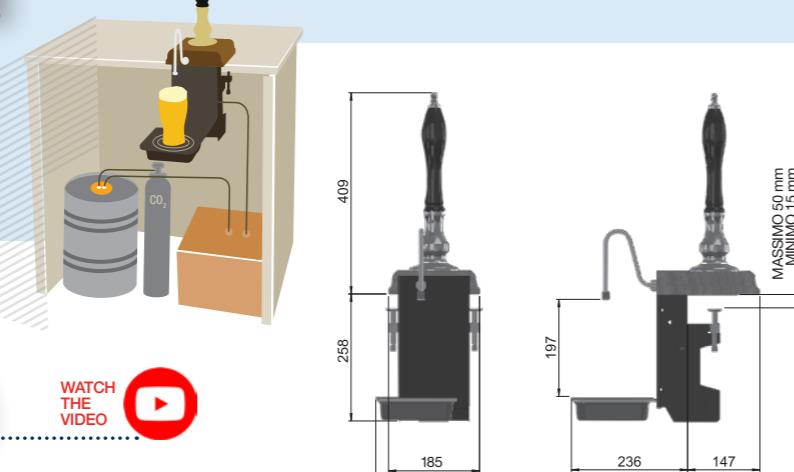

LA NUOVA POMPA CYLINDERLESS PERMETTE DI RIPPLICARE LA TRADIZIONALE SPILLATURA MANUALE. FACILE SIA DA USARE CHE DA INSTALLARE, L'EROGAZIONE AVVIENE TRAMITE UNA LINEA BIRRA E UNA POMPA GAS, SENZA VALVOLA DI SICUREZZA.

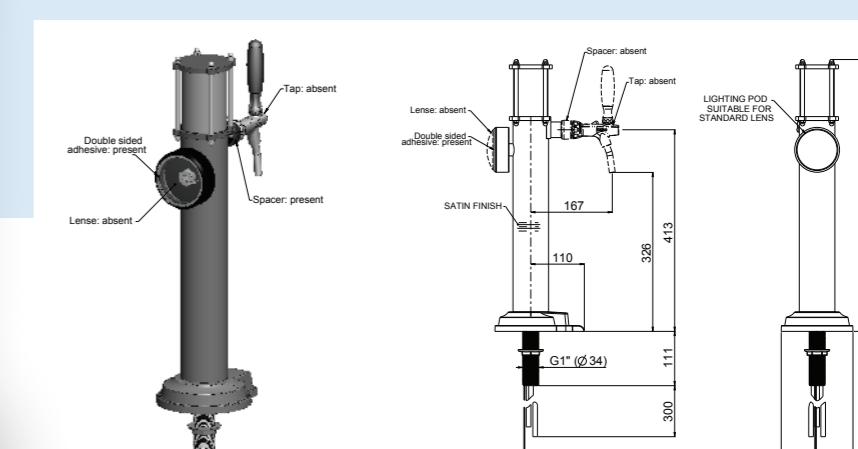

THE NEW CYLINDERLESS BEER ENGINE FROM ANGRAM USES A DAMPER AND VARI-FLOW VALVE TO REPLICATE THE TRADITIONAL HAND PULL. EASY TO USE AND INSTALL, IT WORKS WITH A STANDARD BEER LINE AND GAS PUMP, WITH NO CHECK VALVE REQUIRED.

**ANGRAM**  
The absolute draught experience

## Colonne vitreous amiche dell'ambiente

At Celli S.p.A. respect for the environment is always a priority that we take very seriously. In 2012, 10 years after receiving the certification of our environmental management system (ISO certificate 14001), we launched a new range of products made of vitreous – a highly “smart” eco-friendly material.

It is possible to have classic chrome or gilt finishes, or more ecological ones like PVD. In addition, you can choose from a wide range of colors, bearing in mind that the pigments used to create them – generally oxides – are fixed and stabilized and so aren't dispersed in the environment at the end of their lifespan, as often happens with other, conventional materials. Making the tower in vitreous, it is also possible to choose from a wide range of colours, and even the classic chrome or gilt finishes can be recreated by means of PVD processes. What's more, one particular finish gives an ice-like effect. Last but not least, when the vitreous towers come to the end of their long working life, they will “return to the earth” as simple, inert (non-toxic) waste. The advantages of this technology don't just lie in a respect for the environment, however: with this material, it is possible to produce towers of every shape and size, while always guaranteeing an excellent design standard.

At Celli S.p.A., respect for the environment has always been a priority that we take very seriously. It is possible to have classic chrome or gilt finishes, or more ecological ones like PVD. In addition, you can choose from a wide range of colors, bearing in mind that the pigments used to create them – generally oxides – are fixed and stabilized and so aren't dispersed in the environment at the end of their lifespan, as often happens with other, conventional materials. Making the tower in vitreous, it is also possible to choose from a wide range of colours, and even the classic chrome or gilt finishes can be recreated by means of PVD processes. What's more, one particular finish gives an ice-like effect. Last but not least, when the vitreous towers come to the end of their long working life, they will “return to the earth” as simple, inert (non-toxic) waste. The advantages of this technology don't just lie in a respect for the environment, however: with this material, it is possible to produce towers of every shape and size, while always guaranteeing an excellent design standard.

Some think that environmentally-friendly products must necessarily be more costly than other types, but that's not always the case. Thanks to the possibility to make cost-effective moulds, vitreous reduces the costs involved for small and even tiny ranges. This means we can provide a top quality product even for small customers who don't work on a big scale.

To produce a medium-sized vitreous tower, only 4 kg of CO<sub>2</sub> is released into the atmosphere, compared with the 20 kg for a similar tower made of primary aluminium, 13 kg for a brass tower, and 8 kg for a steel one. During the transportation phase, the reduced weight of the material (compared with metal) means less CO<sub>2</sub> enters the atmosphere and, in the case of intercontinental distances, this is a factor that can't be ignored.

## Vitreous towers environmental friendly

At Celli S.p.A., respect for the environment has always been a priority that we take very seriously. In 2012, 10 years after receiving the certification of our environmental management system (ISO certificate 14001), we launched a new range of products made of vitreous – a highly “smart” eco-friendly material.

Some think that environmentally-friendly products must necessarily be more costly than other types, but that's not always the case. Thanks to the possibility to make cost-effective moulds, vitreous reduces the costs involved for small and even tiny ranges. This means we can provide a top quality product even for small customers who don't work on a big scale.

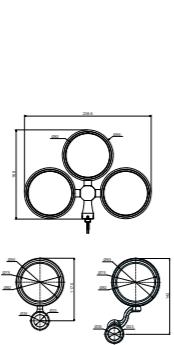

To produce a medium-sized vitreous tower, only 4 kg of CO<sub>2</sub> is released into the atmosphere, compared with the 20 kg for a similar tower made of primary aluminium, 13 kg for a brass tower, and 8 kg for a steel one. During the transportation phase, the reduced weight of the material (compared with metal) means less CO<sub>2</sub> enters the atmosphere and, in the case of intercontinental distances, this is a factor that can't be ignored.

In terms of appearance, vitreous is in no way inferior to other materials. It is possible to obtain the classic chrome or gilt finish with processes that are more ecological than the traditional methods.

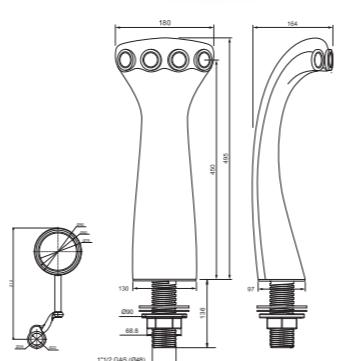

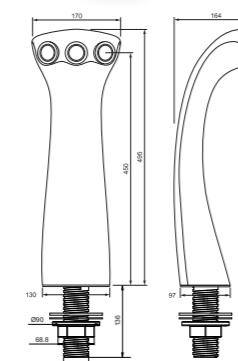

In addition, you can choose from a wide range of colors, bearing in mind that the pigments used to create them – generally oxides – are fixed and stabilized and so aren't dispersed in the environment at the end of their lifespan, as often happens with other, conventional materials. Making the tower in vitreous, it is also possible to choose from a wide range of colours, and even the classic chrome or gilt finishes can be recreated by means of PVD processes. What's more, one particular finish gives an ice-like effect. Last but not least, when the vitreous towers come to the end of their long working life, they will “return to the earth” as simple, inert (non-toxic) waste. The advantages of this technology don't just lie in a respect for the environment, however: with this material, it is possible to produce towers of every shape and size, while always guaranteeing an excellent design standard.

  - CUSTOMISABLE THERMOFORMED SHIELD THAT CAN BE LED ILLUMINATED FOR MINIMUM ORDER QUANTITIES OF 50 PCS - CLICHÉ COSTS TO BE COMMUNICATED SEPARATELY
  - AVAILABLE ALSO WITH ICE EFFECT SHIELD
- CLAMP FIXING VERSION AVAILABLE

## Colonne in semi-grès

Tutte le colonne in porcellana vengono realizzate da maestri ceramisti secondo antiche tradizioni artigiane. La porcellana, rispetto alla ceramica, è molto più resistente agli urti e alle scalfitture e non assorbe liquidi né viene intaccata da detergenti. I colori sono più brillanti e rimangono invariati nel tempo. I corpi e relativi coperchi delle colonne in porcellana possono essere personalizzati con marchi indelebili.

### Caratteristiche tecniche

Per ordinare una colonna in porcellana completa occorre richiedere:

- Corpo+coperchio colonna porcellana, specificando modello, diametro, finitura o decoro
- Relativo cerchio rotondo o ellittico, inox o inox dorato con indicazione dei fori e eventuali flange di riduzione o tappi copriforo
- Relativo kit guarnizioni da posizionare tra cerchio e porcellana
- Relativo fissaggio (fix America)
- Eventuali accessori quali rubinetti, raccogligocce, pomelli, tubi di alimentazione, tubi ricircolo, ecc...

La Celli S.p.A. è stata il precursore nella produzione di colonne in ceramica, e negli anni ha rifornito i marchi più prestigiosi nel mondo. I modelli ed il design di queste colonne erano, e sono ancora, molto originali, e restano dei punti di riferimento molto apprezzati dai nostri clienti.

Da allora ne abbiamo fatta di strada, e la tecnologia di realizzazione si è evoluta. Dalla ceramica siamo passati negli anni alla porcellana e oggi abbiamo deciso di proporre colonne ancora più resistenti agli urti, realizzandole in un nuovo materiale: il semi-grès. In questo modo possiamo fornire le nostre colonne con le forme che già il mercato conosce ed apprezza, con i loghi e i marchi del prodotto erogato, ma in materiale più resistente. Con il semi-grès possiamo anche realizzare pomelli e medaglioni reclamizzati. Le colonne sono assemblate con cerchi torniti in acciaio inox 304, oppure in acciaio inox con flash di doratura, con diametri da 100, 120, 130, 150 e 170, per 1, 2, o 3 rubinetti, oppure con cerchi ellittici da 3 a 6 rubinetti.

Sono disponibili anche cerchi per valvole post-mix da 4 a 8 valvole.

## Semi-sandstone towers

Porcelain towers are made by master potters with traditional handcrafting techniques. Porcelain, in comparison to ceramic, is much more resistant to shocks and scratches, it does not absorb liquids and cannot be damaged by detergents.

Therefore colours are brighter and more vivid, resisting colour change over prolonged periods of time. Bodies and covers of porcelain towers can be customized with indelible logos.

### Technical Features

When ordering a complete tower, the following items are necessary:

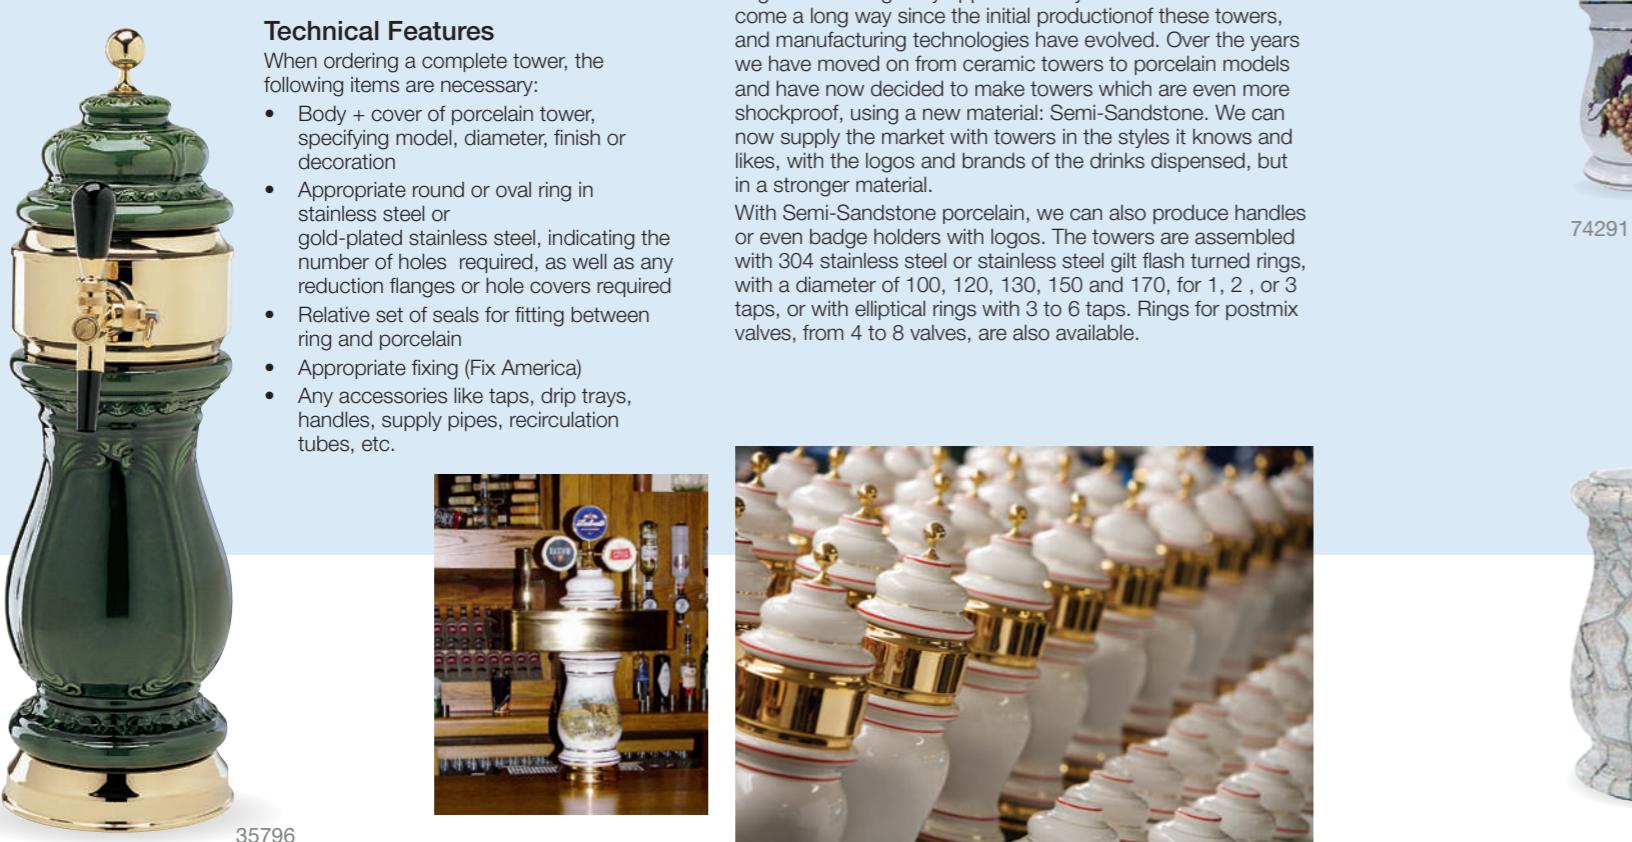

- Body + cover of porcelain tower, specifying model, diameter, finish or decoration
- Appropriate round or oval ring in stainless steel or gold-plated stainless steel, indicating the number of holes required, as well as any reduction flanges or hole covers required
- Relative set of seals for fitting between ring and porcelain
- Appropriate fixing (Fix America)
- Any accessories like taps, drip trays, handles, supply pipes, recirculation tubes, etc.

35796

Celli S.p.A. was a forerunner in the production of ceramic towers and over the years has supplied the most prestigious brands worldwide. The models and designs of these columns have been and still are highly original and are greatly appreciated by our clients. We have come a long way since the initial production of these towers, and manufacturing technologies have evolved. Over the years we have moved on from ceramic towers to porcelain models and have now decided to make towers which are even more shockproof, using a new material: Semi-Sandstone. We can now supply the market with towers in the styles it knows and likes, with the logos and brands of the drinks dispensed, but in a stronger material.

With Semi-Sandstone porcelain, we can also produce handles or even badge holders with logos. The towers are assembled with 304 stainless steel or stainless steel gilt flash turned rings, with a diameter of 100, 120, 130, 150 and 170, for 1, 2, or 3 taps, or with elliptical rings with 3 to 6 taps. Rings for postmix valves, from 4 to 8 valves, are also available.

# Circuito refrigerante Cooling circuit

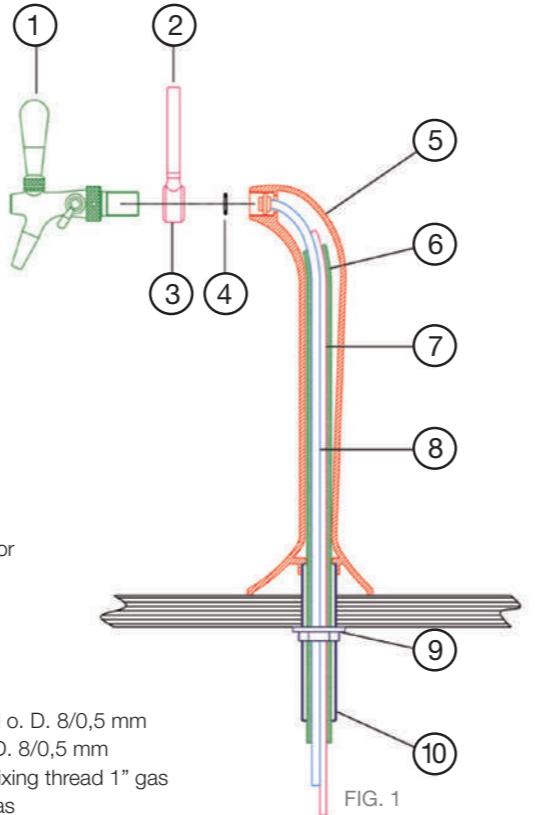

L'acqua fredda, prelevata dalla vasca del gruppo refrigerante da un'apposita pompa, viene inviata in una delle due tubazioni poste a diretto contatto con quella di trasferimento bevanda (pitone). Il circuito viene richiuso e quindi l'acqua ritorna in vasca, tramite l'altra tubazione. Allo scopo e a seconda della tipologia delle colonnine possono essere utilizzati vari accorgimenti. Nel caso della COBRA® (vedi Fig. 1) la funzione è svolta da un tubo in rame o inox ripiegato, inserito a pressione all'interno della colonnina. Il contatto fra metalli assicura un buon raffreddamento dell'insieme. Nelle colonne in ceramica, invece, dove lo spazio è maggiore, si può ottenere la chiusura del circuito proprio a diretto contatto del rubinetto garantendo così un raffreddamento ottimale.

The cold water is taken from the bath of the cooling unit by a special pump and sent to one of the two tubes situated at direct contact with the transfer drink line (python). The circuit is closed and therefore the water returns to the bath thanks to the other tube. In the case of the COBRA® tower (see picture 1) this function is carried out by a copper tube, folded up and inserted into the tower. The contact between metals assures a good cooling. In the ceramic towers where there is more space available, it is possible to close the circuit at direct contact of the tap assuring in this way the best possible cooling.

# Raccoligocce, basi e lavelli Driptrays, bases and sinks

In questo catalogo è rappresentata la gamma completa di raccoligocce e basi di produzione Celli e di lavelli e basi di produzione Franke. Questi ultimi costituiscono un necessario complemento di gamma e si indirizzano, insieme a tutta una serie specifica di accessori disponibili quali ad esempio spazzole lavabicihieri, taglia schiuma, detergenti, ecc... a locali con connotazioni particolari. L'ampiezza e la qualità delle proposte Celli sono veramente notevoli: tutti i raccoligocce sono ottenuti da stampaggio e non vi sono più angoli saldati: pertanto oltre ad una migliore finitura, la pulizia ne è avvantaggiata. Inoltre la realizzazione è completamente in acciaio inox 304 lucido oppure con doratura flash all'esterno della vaschetta.

In this catalogue we present the complete range of driptrays and bases produced by Celli and of sinks by Franke. Sinks are necessary elements for our range of products and together with other accessories, such as brushes for glass washing, foam cutters, detergents, etc... Are targeted to bars and pubs with particular features.

Celli offers a wide selection of products with high quality: all driptrays are the result of a moulding process without welded angles, therefore they have a better finish and can be cleaned more easily.

They are also made of 304 bright stainless steel or with an external gold plating.

**Bagna bicchieri Ariel:** un'idea esclusiva, un accessorio innovativo

**Duplice funzionalità:** Uno spruzzo centrale per bagnare l'interno del bicchiere; una corona circolare con spruzzi a fontana per bagnare e sciacquare anche l'esterno.

**Semplicità e praticità:** Con una semplice pressione Ariel consente di bagnare il bicchiere sia all'interno che all'esterno.

**Tre importanti vantaggi:**

- Bicchiere perfettamente raffreddato per una migliore qualità della bevanda erogata.
- Maggiore igiene e completa pulizia del vetro, sciacquando anche all'esterno.
- Eccellenza del servizio, per una schiuma perfetta, una temperatura ideale...

## Ariel glass fountain: a unique idea, an innovative accessory

**Dual function:** A central spray to rinse the inside of the glass; a circular crown with fountain sprays to wash and rinse the outside.

**Simple and practical:** Ariel allows to rinse the glass both inside and outside with a simple pressure.

### Three important benefits:

- The glass is perfectly cooled for better quality of the dispensed beverage.
- The glass is healthy and perfectly clean, in that the outside is also rinsed.
- Excellent service with perfect foam, ideal temperature...

## RACCOGLIGOCCE DA APPOGGIO DRIPTRAYS ON-THE-COUNTER
